

Experiences

1996 – Today

Self-employed, Montreal

- Software and hardware technical support
- FileMaker and Access databases development
- Excel worksheets with VBA Macros development
- Progressive Web Applications (PWA) development
- Websites development

1986 – 1996

Commission scolaire Les Écores, Laval

- Software and hardware technical support
- Computer troubleshooting and data recovery
- Windows NT, NetWare and Macintosh network administration and support
- FileMaker Pro, FoxPro and Access databases development
- Secretaries and teachers training

Skills

Programming

- Visual Basic for Applications (VBA)
- Add-ins for Microsoft Office
- Power Query M formula language
- Structured Query Language (SQL)
- Regular Expressions (RegEx)
- PHP / JavaScript / AJAX

Skills

.NET Programming

- Visual C#
- Visual Basic .NET (VB.NET)
- Visual Studio Tools for Office (VSTO)
- ASP.NET Web Pages
- ASP.NET Web API
- Blazor Web App

Web Programming

- HTML / XML / XHTML
- Cascading Style Sheets (CSS)
- Scalable Vector Graphics (SVG)
- JavaScript / jQuery
- Bootstrap
- VBScript
- Classic ASP
- ASP.NET
- PHP
- WordPress / WooCommerce
- WPML / Polylang / GetText
- Formidable Forms
- Gravity Forms / GravityViews
- REST API / OData
- gRPC / ProtoBuf

Skills

Microsoft Office

- Microsoft Word
- Microsoft Excel
- Microsoft Access
- Microsoft PowerPoint
- Microsoft Outlook
- Microsoft Power Query
- Macros / VBA

Databases

- Microsoft SQL Server
- Microsoft Access
- FileMaker Pro
- MySQL

Development Environments

- Visual Studio Professional
- Visual Studio Code
- Adobe Dreamweaver

Troubleshooting

- Microsoft Windows
- Apple macOS
- Apple iOS
- Android OS
- Modems / Routers / Wi-Fi
- Local Network / Internet
- Malwares (virus)

Accomplishments

- Microsoft Word template with VBA macros to retrieve the content of a WordPress page and merge it into the document, applying the styles defined in the template.
- Progressive Web Application (PWA) developed with Blazor WASM for mobile devices, allowing patients to submit their progress to the practitioner, who then receives these submissions directly within his WordPress site.
- WordPress Plugin to query a partner website about a member's status in order to apply a discount based on his membership.
- Windows Forms Client Application that sends instructions to a Programmable Logic Controller (PLC), which are received via the REST API of an ASP.NET Web API Application hosted on a Linux Server.
- Microsoft Access Database for normalizing postal addresses and eliminating duplicates in a client list.
- WordPress Plugin that displays a custom interactive map featuring district boundaries, cycling paths, and municipal buildings for a city using the Google Maps API.
- Microsoft Excel Workbook that retrieves the product list of a WooCommerce website via its REST API with a query by using the Power Query M formula language.
- WordPress Plugin that restricts the size of media files uploaded by the contributors, based on content category and administrator-defined settings.
- WordPress Plugin allowing to simulate the display of a painting on the wall for the website of an artists' workshop.
- WordPress Plugin allowing the practitioner to manage his list of patients and candidates using Formidable Forms.
- Arduino Sketch (C++) designed to control actuators by executing a sequence of instructions stored on a Linux PHP server, with data communication handled via Google Protocol Buffers (Protobuf).
- Windows Console Application allowing to emulate the native Linux `sendmail` command to allow PHP on Windows to send emails without requiring an additional extension.
- WordPress Plugin to add money and view balances of meal cards for a cafeteria service.

Accomplishments

- PHP Script allowing the addition of PayPal payment processing into a food service company's PHP extranet.
- VSTO add-in for Microsoft Outlook that integrates CRM functionalities, such as invoicing and receipt generation, directly into the application.
- Windows Forms Application simplifying the use of **robocopy**, a robust and efficient command-line utility integrated into Windows, for file copying.
- FileMaker Pro Database that automatically generates school supply purchase orders for college students, based on their study program.
- Microsoft Access Database that automatically generates a price list by selecting the lowest prices offered by suppliers.
- Microsoft Excel Workbook that allows self-employed workers to track their income and expenses and then generate various accounting reports for tax declarations.
- Microsoft Access Database for producing comparative balances and financial statements, according to various redefinable groupings for a financial institution.
- FileMaker Pro Database for managing a purchasing department, deployed in three distinct versions in three school establishments.
- FileMaker Pro Database for tracking the production and calculating payroll and bonuses paid to a factory's productive employees.
- FileMaker Pro Database for tracking the training activities and managing the sales of student workbooks of a pedagogical development center.
